ParaBank - Fund Transfer Module

Bug Log

The following table summarizes all defects identified during Cycle 1 manual testing of the ParaBank Fund Transfer module. Where multiple test cases triggered the same root cause, they are consolidated into one bug entry, and all related TC IDs are referenced.

Bug Reports

FTM_BUG_001 - Fund Transfer Allows Overdraft - No Server-Side Balance Validation

Field	Details
Bug ID	FTM_BUG_001
Submitted On	2026-03-26
QA	Russell Bernardo
Bug Title	**Fund Transfer Allows Overdraft - No Server-Side Balance Validation**
Severity	**Critical**
Related TC(s)	TC_004, TC_005, TC_006, TC_016
Description	The Fund Transfer module processes transactions even when the source account has insufficient funds. No server-side balance validation is performed before executing a transfer. Accounts can be driven into a negative balance with no error shown to the user.
Steps to Reproduce	1. Log in to ParaBank 2. Navigate to Transfers > Transfer Funds 3. Select a source account with a balance less than the intended transfer amount 4. Select a valid destination account 5. Enter a transfer amount greater than the source account balance (e.g., balance: $515.49, amount: $515.50) 6. Click 'Transfer'
Expected Result	System displays an insufficient funds error. Transfer is not processed. Account balances remain unchanged.
Actual Result	Transfer is processed and 'Transfer Complete!' is displayed. Source account balance drops below zero (e.g., $515.49 balance drops to -$0.01 after a $515.50 transfer). No error or warning is shown at any point.

FTM_BUG_002 - Zero-Amount Fund Transfer Accepted and Creates Phantom Transaction Record

Field	Details
Bug ID	FTM_BUG_002
Submitted On	2026-03-26
QA	Russell Bernardo
Bug Title	**Zero-Amount Fund Transfer Accepted and Creates Phantom Transaction Record**
Severity	**Major**
Related TC(s)	TC_008
Description	The Fund Transfer module accepts an amount of $0.00 and processes it as a successful transfer. A $0.00 transaction record is created in account activity, polluting transaction history with meaningless entries. No validation error is shown to the user.
Steps to Reproduce	1. Log in to ParaBank 2. Navigate to Transfers > Transfer Funds 3. Select a valid source account 4. Select a valid destination account 5. Enter amount: 0 6. Click 'Transfer'
Expected Result	System displays a validation error indicating the amount must be greater than zero. Transfer is not processed. No transaction record is created.
Actual Result	'Transfer Complete!' confirmation is displayed for a $0.00 transfer. A $0.00 transaction entry is created in account activity for both accounts. No validation error is triggered.

FTM_BUG_003 - Negative Transfer Amount Accepted - Transaction Executes in Reverse Direction

Field	Details
Bug ID	FTM_BUG_003
Submitted On	2026-03-26
QA	Russell Bernardo
Bug Title	**Negative Transfer Amount Accepted - Transaction Executes in Reverse Direction**
Severity	**Critical**
Related TC(s)	TC_009
Description	The Fund Transfer module accepts a negative amount value and executes the transfer. The negative value reverses the transfer direction — effectively crediting the source account and debiting the destination. This is a critical financial logic vulnerability that could be exploited.
Steps to Reproduce	1. Log in to ParaBank 2. Navigate to Transfers > Transfer Funds 3. Select a valid source account 4. Select a valid destination account 5. Enter amount: -100 6. Click 'Transfer'
Expected Result	System rejects the negative value. A validation error is displayed indicating the amount must be positive. Transfer is not executed.
Actual Result	The system accepted the negative value and processed the transfer. The transaction executed in reverse — the source account was credited and the destination account was debited. No validation error was shown.

FTM_BUG_004 - Same-Account Transfer Not Blocked - Source Account Selectable as Destination

Field	Details
Bug ID	FTM_BUG_004
Submitted On	2026-03-26
QA	Russell Bernardo
Bug Title	**Same-Account Transfer Not Blocked - Source Account Selectable as Destination**
Severity	**Major**
Related TC(s)	TC_012, TC_013
Description	The 'To Account' dropdown on the Transfer Funds page does not exclude the account selected as the 'From Account'. Users can select the same account as both source and destination. The system processes the transfer without error, creating redundant transaction records that inflate account activity.
Steps to Reproduce	1. Log in to ParaBank 2. Navigate to Transfers > Transfer Funds 3. Select account 15123 as the 'From Account' 4. Observe the 'To Account' dropdown 5. Select account 15123 as the 'To Account' (same account)

	6. Enter amount: $100.00 7. Click 'Transfer'
Expected Result	Account 15123 should not appear in the 'To Account' dropdown after being selected as source. If selected, an error should be shown and the transfer blocked.
Actual Result	Account 15123 remains visible and selectable in the 'To Account' dropdown. The transfer processes with no error. Balance is unchanged (net zero) but both a debit and credit transaction record are created, inflating account activity.

FTM_BUG_005 - No Maximum Transfer Limit Enforced - Arbitrarily Large Amounts Accepted

Field	Details
Bug ID	FTM_BUG_005
Submitted On	2026-03-26
QA	Russell Bernardo
Bug Title	**No Maximum Transfer Limit Enforced - Arbitrarily Large Amounts Accepted**
Severity	**Major**
Related TC(s)	TC_017
Description	The Fund Transfer module does not enforce an upper limit on the transfer amount. An amount of 999,999,999,999,999 was entered and processed without any error or cap. Combined with the absence of balance validation (BUG_001), this allows arbitrarily large negative balances to be created.
Steps to Reproduce	1. Log in to ParaBank 2. Navigate to Transfers > Transfer Funds 3. Select a valid source account 4. Select a valid destination account 5. Enter amount: 999999999999999 6. Click 'Transfer'
Expected Result	System enforces a maximum transfer limit and displays an appropriate error. Transfer is blocked. No system crash occurs.
Actual Result	The system accepted the value and processed the transfer without error. No maximum limit was enforced. The application remained stable but created an extremely large negative balance in the source account.

FTM_BUG_006 - Destination Account Transaction Mislabeled as 'Funds Transfer Sent' Instead of 'Funds Transfer Received'

Field	Details
Bug ID	FTM_BUG_006
Submitted On	2026-03-26
QA	Russell Bernardo
Bug Title	**Destination Account Transaction Mislabeled as 'Funds Transfer Sent' Instead of 'Funds Transfer Received'**
Severity	**Major**
Related TC(s)	TC_020
Description	After a successful fund transfer, the transaction record in the destination (receiving) account is incorrectly labeled as 'Funds Transfer Sent' instead of 'Funds Transfer Received'. The transaction is also recorded as a debit rather than a credit, misrepresenting the financial record for the receiving account holder.
Steps to Reproduce	1. Log in to ParaBank 2. Navigate to Transfers > Transfer Funds 3. Transfer $100.00 from account 17123 to account 18123 4. Click 'Transfer' — confirm the success page appears 5. Navigate to Accounts Overview 6. Click on the destination account 18123

	7. Review the Account Activity section
Expected Result	The transaction in account 18123 is labeled 'Funds Transfer Received'. The transaction type is recorded as a credit and the amount shows as +$100.00.
Actual Result	The transaction in account 18123 is labeled 'Funds Transfer Sent' — identical to the sender's label. The transaction is recorded as a debit rather than a credit. Only the amount and date are correct.
